AMP5 Award

Stonbury are delighted to have been awarded the ‘Service reservoir and concrete structures repair and refurbishment contract’ with Northumbrian Water for both their Northumbrian and Essex & Suffolk Water regions.

The contract runs for up to 10 years and covers refurbishment, repairs and improvement works both internally and externally.

This includes, but is not limited to, the application of coatings and linings to steel and concrete structures together with other associated minor engineering works. The structures will principally comprise service reservoirs and water towers.

However, works to aqueducts, river structures and water treatment works assets can also be included if required. This is the third consecutive Northumbrian Water framework Stonbury have been awarded since 2000 and we look forward to the continuation of our successful relationship with them.
