MAINTAIN REPAIR REFURBISH BUILD

PROJECT ENVIRONMENT PROGRAMMES

Stonbury delivers a broad range of services within the water environment for trusts, councils and environmental agencies throughout England and Wales. Each year Stonbury delivers a large variety of water environment programmes that protect citizens, safeguard the environment and enhance biodiversity.

Asset Construction and Maintenance

Stonbury design and deliver an extensive range of minor civil engineering build and maintenance programmes within the riverine environment. Examples include but are not limited to:

- Channel modification & installation of in-channel features
- Embankment stabilisation & erosion protection
- Replacement of structures such as weirs & bridges
- Maintenance & minor building works on gauging stations, telemetry kiosks & pumping stations
- Repairs to culverts, outfalls, pipes & flap valves
- Design and installation of fish & eel passes
- Fabrication works including staircases & debris screens
- Drainage solutions
- Access trackway installation

Asset Operation and Response

Stonbury supports organisations with asset operations including asset condition inspections and clearance, flood gate and lock operations and pumping and temporary works. Stonbury also deploys out-of-hours and emergency response teams during floods, asset failures and other incidents.

Land Management

Stonbury completes a range of arboricultural and agricultural services within the riparian environment that maintain land and river assets. This includes; grass cutting, vegetation management, tree surveys, felling & planting, channel clearance, pest control and livestock fencing & trough installation.

Flood Prevention

Offering both hard and soft engineering capabilities, Stonbury delivers channel modifications that utilise earth, aggregate and geotextile and natural flood prevention schemes such as re-naturalising, wetland establishment and tree-planting, which reduce the volume of rainwater entering settlements.

River Restoration

Restoring rivers to their natural geomorphology results in wide-reaching benefits for water quality, flood protection and biodiversity. Stonbury deliver a variety of schemes from smallscale chalk stream restoration to major civils programmes.

Habitat Creation

Stonbury provides habitat creation and restoration works to help clients comply with Environmental Net Gain (ENG) and Biodiversity Net Gain (BNG) targets and offset carbon emissions. This includes:

- River & wetland restoration
- Tree & shrub planting & riparian corridor creation
- Pond management & invasive non-native species control
